imgale's

First founded in 1968 by Josef and Elda Wagmeister as a small family business, today Polyfaser is one of the leading companies for premium glass fibre-reinforced plastic (GRP) swimming pools and roofing systems. We are successful throughout Europe thanks to our top quality, complete reliability and ability to fulfil everyone's swimming pool dreams in terms of shape, design and function.

Our extensive product range is all manufactured at our company headquarters in Prato allo Stelvio in South Tyrol. That is where, every year, we produce about 800 monobloc pools, 300 roofing systems and 25 element pools, all using the latest technologies.

And we also owe our excellent reputation to our careful planning, punctual delivery, smooth assembly and professional installation of our pools.

Extend

THE BATHING SEASON

Enjoy your swimming for longer!

With a roofing over your pool, you can enjoy it whatever the weather. The water remains crystal-clear, clean and comfortably warm, while energy costs are significantly reduced. It also keeps people and animals safe. We think it's really important for roofing systems to be simple and convenient to use.

But there are more than just practical reasons why you should consider our roofings. We are famous for our aesthetically pleasing and technically sophisticated designs that form a harmonious visual whole with our pools. Whether they are extra-flat, curved, semicircular or of varying height and offering easy access - every model creates a different architectural effect and enhances your pool.

For us, being pleasing to the eye also means top quality. That's why we use durable aluminium and perfectly clear, unbreakable polycarbonate for our roofing systems.

- Perfectly clear, impact-resistant polycarbonate panels
- Front panel flips up

Aluminium profile colours

Standard

Dark grey (Anthracite) DB 703

Grey metallic RAL 9006

White RAL 9010

Special colours

Frame can be coated in any RAL shade on request.

Special features

Sliding panel at the side

This can be fitted on the left or the right to allow easy access to the pool.

Lockable design

The completely lockable roofing is safe for children and pets.

Panels in front or back wall lift up

These opening panels of customisable height ensure adequate ventilation and comfort when swimming with the roofing partly open.

ROOFING: Opal
COLOUR: Dark grey

Standard features

Glazing

When it comes to materials, it's crystal-clear that Polyfaser uses only the best. Our top-quality, 4 mm thick, solid polycarbonate panels are impact-resistant and shatterproof, and UV-stabilised on both sides. Highly resistant to weather, ageing and temperature, for long-term protection.

Runners

The compact, rounded runners are also designed with a view to durability: their surface is extra tough and wear-resistant. Because the runner is only 11 mm high, it can be mounted at the edge of the pool without getting in the way. The runner can also be sunk into the ground using a concealed frame, so that it is flush with the edge of the pool.

Securing bracket

An important detail of all Polyfaser roofings is the in-line anti-storm bracket. Once locked, it holds the roofing firmly in position, whatever the weather.
